

U.S. Patent Application No. 09/694,593
Attorney's Docket No. 99-317 CIP1 RCE1

AMENDMENT TO THE SPECIFICATION

Please substitute the following correct paragraph for the original paragraph on page 11, starting on line 9 and ending on line 16.

Computer 102 determines if it includes a packetized telephone peripheral, such as peripheral 235, among its active components [step 700] (FIG. 7). If so, computer 102 sets up a packetized phone call with the called party using packetized telephone peripheral 235 and conventional packetized telephony techniques [step 705]. If computer 102 does not include a packetized telephone peripheral 235, computer 102 determines if a calling party number has been previously stored in [[ROM 225]] memory [step 710]. If not, computer 102 prompts the user, via output device 215, for example, to enter a calling party number [step 715]. Computer 102 then stores the entered calling party number in [[ROM 225]] RAM 220 [step 720].
